PyBITS

Python is a widely used, high-level programming language. Its design philosophy emphasizes code readability, and its syntax allows programmers to express concepts in fewer lines of code than possible in languages such as C++ or Java. Python is one of the most in-demand programming languages in the world today, as its clear and concise syntax allows for fast prototyping and development, and helps in writing highly maintainable code. Keeping this in mind, **BITS Pilani Hyderabad Campus**, in association with the **Python Software Foundation**, will be hosting a Python workshop on **16th October** as a part of its annual national technical festival, ATMOS.

OBJECTIVE OF WORKSHOP

The main objective of this workshop is to teach participants the fundamentals of Python. By the end of the workshop, participants will be equipped to use Python as a general programming language and will also be able to use Python for their own personal projects. The **workshop** shall be **6 hours** long, and divided into two parts. The first part will be **4 hours** long and will start at 9 AM. In this part, students will be introduced to the basic syntax and various concepts in Python. After a short break, in the second part, students will use their learning to implement various small projects and games using Python, in the process learning more about the language.

Please see this link to register for the same - [Registration Link](#)
Also, do note that you would need to select the "**Python workshop**" at the end of the list in order to register for this workshop.
